

PRASANNA V

B.Tech – Artificial Intelligence & Data Science

v.p.infinix@gmail.com | <https://www.linkedin.com/in/prasanna-v-dataanalyst> | github.com/PrasannaV569

PROFESSIONAL SUMMARY

Final-year B. Tech student in Artificial Intelligence & Data Science with hands-on experience in Machine Learning, Artificial Intelligence and Data Analysis. Good in Python, SQL, Power BI, and MySQL. Delivered two end-to-end data analysis projects and led a team for an offline AI voice assistant as a final-year capstone. Actively seeking internship or full-time opportunities in Data Analysis and AI.

EDUCATION

B.Tech – Artificial Intelligence & Data Science — AVS Engineering College, Salem

CGPA: 8.0 / 10 (up to 7th Semester) 2026 – Present

HSC (Class XII) — GBHS School, Mecheri

443 / 600 (73.8%) 2022

SSLC (Class X) — GBHS School, Mecheri

378 / 500 (75.6%) 2020

TECHNICAL SKILLS

Programming Languages: Python, Java, C#, SQL

Data Analysis & BI: Power BI (DAX, Power Query, Star Schema, ETL), Microsoft Excel, SQL

Databases: MySQL, MongoDB

Web Development: HTML, CSS, JavaScript

AI & NLP: Machine Learning, NLU/NLP, Faster-Whisper, TTS

Developer Tools: Git, GitHub, VS Code, Anaconda

Productivity & AI: Microsoft Excel, Power BI, Gemini, ChatGPT, Claude

WORK EXPERIENCE

Machine Learning Intern

ABE Group of Companies | Aug 2024

- Implemented supervised learning algorithms (classification and regression) using Scikit-Learn, Python, and Pandas.
- Performed data preprocessing and feature engineering to improve model accuracy and reduce noise.
- Explored and evaluated ML accuracy metrics and model performance evaluation techniques.

MERN Stack Intern

Livewire – Salem | Feb 2025

- Developed a full-stack application with secure user authentication using Passport.js and session management.
- Designed and executed full CRUD operations to manage data flow between the React frontend and MongoDB.
- Built responsive UI components with React and integrated them with a Node.js/Express.js backend.

PROJECTS

Smart Banking Engine | Data Analysis – MySQL

Technologies: MySQL, Database Triggers, Window Functions, Relational Schema, Risk Analytics

- Designed a 3-table relational banking schema (Customers, Accounts, Transactions) with cascading foreign keys from scratch.
- Engineered a database trigger to prevent overdrafts at the database level, blocking all insufficient-fund withdrawals.
- Implemented a geo-velocity fraud detection trigger that flags and blocks physically-impossible cross-location transactions within 10 minutes.
- Used SQL Window Functions (SUM OVER PARTITION BY) to compute a running ledger balance per account across all transactions.

Global AI Workforce & Salary Insights Dashboard | Data Analysis – Power BI

Technologies: Power BI, DAX, Power Query (ETL), Star Schema, Data Modeling, Field Parameters

- Built an enterprise-grade 3-page interactive Power BI report tracking global AI hiring volumes and compensation benchmarks.
- Designed a Star Schema data model (Fact_Postings + 4 dimension tables) with a Many-to-Many skill bridge table for cross-filtering.
- Performed Power Query ETL to split pipe-delimited skill columns into 93 unique normalized skill assets.
- Implemented native Field Parameters for dynamic axis switching across 5 dimensions (Job Category, Experience, Industry, etc.).

Cortex – Offline AI Voice Assistant | Team Lead

Technologies: Python, Faster-Whisper, NLU, NLP, TTS, Knowledge Graph GUI

- Led a team to build a fully offline AI voice assistant focused on 100% local execution with minimal CPU/RAM usage.
- Designed a custom JSON-trained NLU engine for intent classification without any external APIs.
- Developed a repositionable always-on-screen status window GUI, a Control Center, and a Neural Sync automation module (mini n8n).
- Built a Knowledge Graph GUI for visual representation of assistant knowledge and a real-time speech interruption system.

Gold Price Tracker & Predictor

Technologies: Python, Flask, REST API, Data Analysis, Machine Learning

- Fetched live gold price data from the Gold API and displayed it on a web dashboard built with Python Flask.
- Trained a predictive ML model on historical gold price datasets to forecast the next day's gold rate.

Game Zone Platform | Full-Stack MERN

Technologies: HTML, CSS, JavaScript, MongoDB, Express.js, Node.js

- Built a full-stack web application during MERN internship with complete CRUD operations backed by MongoDB.
- Implemented user authentication: only authenticated users are permitted access to the games section.
